Advanced Cheque Automation Systems (ACA)

The mantra, "*do more with less*" pervades today's business climate, and companies are increasingly embracing Customer Self Service.

Customer Self Service e-commerce Systems, enable customers to help themselves complete their routine tasks, without having to wait around to be served! In so doing, companies improve customer experiences and relationships thereby increasing profit. Furthermore the systems lowers costs and relieves personnel from everyday repetitive tasks allowing them to apply their skills and experience to more complex matters and increasing business.

ACA Systems automate the acceptance of cheques for processing, without having to fill up deposit slips or use envelopes. At the same time customers are able to obtain a receipt with the deposited cheque image and transaction details. The process is quick, easy and secure. All data and images are stored for processing and integration into other Applications. The 4Series Systems are ready for online Image Cheque Clearing (ICC) environment.

Cheques will continue to remain the payment instruments of choice especially for business transactions in the foreseeable future.
